Champion Charter School Excellence

2016 Annual Conference

Addressing the Effects of Trauma on Learning

- This Workshop will provide specific strategies on how to work with individuals, who have had significant trauma in their lives. The workshop will provide teachers/staff with specific coping skills to help students learn how to cope with symptoms directly related to trauma.

Addressing the Effects of Trauma on Learning

- The strategies in This workshop have been implemented specifically with students at our charter school, whom have become stagnant in their ability to learn, as a direct result of anxiety and depression that has been linked to traumatic events in their lives.

- The staff at GBCS has incorporated some of the basic DBT skills into the school culture and curriculum. The mental health staff has worked with the teachers and students in implementing common language and goals around DBT. As many of us know, trauma has a great impact on ones self esteem and self confidence, which in turn effetcs their ability to learn more proficiently.
